

➤ Project Planning & Management

1. Project Proposal

Project Overview :

This project aims to analyze retail sales and supply chain performance using Power BI to provide actionable insights for decision-making.

Objectives:

- Analyze sales performance
- Identify top & low-performing products
- Evaluate supply chain efficiency
- Improve inventory and delivery decisions

Scope:

- Data cleaning & transformation
- Dashboard creation
- KPI tracking

2. Project Plan

- Week 1: Data Cleaning
- Week 2: Data Modeling
- Week 3: Dashboard Design
- Week 4: Insights & Presentation

3. Task Assignment

- Data Cleaning → عبدالله بدوي على
- Modeling → محمد اشرف السيد
- Dashboard → عبدالفتاح كمال محمد
- Analysis → مينا حنا حنا – ولا محمد احمد

4. Risk Assessment

- Risk
- Solution
- Data is messy
- Clean using Power Query
- Missing values
- Replace or remove
- Wrong analysis
- Validate results

5. KPIs

- Total Sales
- Total Profit
- Order Count
- Delivery Time
- Inventory Turnover
- Top Products
- Sales by Region

➤ Literature Review

This project was evaluated based on data analysis techniques, dashboard design, and ability to extract meaningful insights.

Suggested Improvements

Add predictive analysis

Use AI visuals

Improve UI/UX

➤ Requirements Gathering

Stakeholders

Management

Sales Team

Supply Chain Team

User Stories

As a manager, I want to see total sales so I can track performance

As a supply chain manager, I want to track delivery delays

As a sales manager, I want to know top products

Functional Requirements

Dashboard shows sales KPIs

Filters by date / region

Product analysis

Non-Functional

Fast performance

Easy to use

Clear visuals

➤ System Analysis & Design

Problem Statement

Retail businesses struggle to monitor sales and supply chain performance efficiently due to scattered data.

Solution

Power BI Dashboard that:

Centralizes data

Provides real-time insights

Helps decision-making

Use Case

User opens dashboard

Selects date

Views KPIs

Takes decision

Architecture

Data Source (Excel)

Power Query (Cleaning)

Data Model (Relationships)

Dashboard

Database Design

Orders Table

Products Table

Customers Table

Regions Table

Data Flow

Excel → Power Query → Data Model → Dashboard → Insights
